FLEXIBLE POLYMER SHELVING SYSTEM

Conforms to NSF/ANSI standard 2 - food equipment, for all environments including fridges and freezers

EKO FIT POLYMER SHELVING

THE MOST FLEXIBLE SHELVING SYSTEM AVAILABLE, WITH LENGTHS UP TO 2 METRES AND 330 SIZE VARIATIONS

- Superior strength and hygiene, ideal for all food service areas including cold rooms and freezers
- Load bearing parts are manufactured with high strength anodised aluminium, up to 250kg per shelf, 1000kg per bay UDL
- Plastic components moulded to high resistance using basic acids and bacteria proof raw materials
- Easily removable and dishwasher proof shelf slats
- Temperature resistance range is -30°C to +90°C
- Accreditations from NSF and NF.

*NOTE: Load capacity based on static units. Load capacities may vary according to design. Please contact us for accurate load bearings for your desired design. Shelf elements suitable for cleaning in standard commercial dishwasher and detergents. Not suitable for use in autoclaves. Easy to clean wipe down surface or simply remove slats.

FOOD GRADE

means that foods must be stored direct in our shelving systems without being wrapped in packaging.

AVAILABLE IN

- 5 depths – 300, 375, 450, 525 and 600mm
- 22 lengths – 470 – 2045mm in 75mm increments
- 4 heights – 1550mm, 1700, 2000 and 2450mm

EKO FIT POLYMER SHELIVING

MORE THAN 3000 POSSIBLE COMBINATIONS

- Individually customised to needs and physical conditions
- First-class food safety
- Minimise wastage

A racking system with limited depth and width combinations can lead to wasted space and a poor fit for ISO containers and similar models.

Ideal utilisation of the storage facility

EKO FIT POLYMER SHELIVING

Eliminating waste is the key to ideal utilisation of a storage facility. Reducing wasted time and products will significantly enhance your bottom line.

This also explains why waste management is a key concept for Shelfspan and how we develop your solution.

Climate and the environment have been on the Shelfspan agenda for a long time now. We acknowledge our responsibility, and the significance of environmental factors have for a growing segment of customers, both yours and ours.

Eko Fit is 99.9% recyclable from packaging to product

Not only are statutory requirements continually tightening to minimise environmental impact, but many of our customers also go beyond legal obligations and "vote with their feet." If they perceive that we are not taking environmental issues seriously, they will choose to take their business elsewhere.

Climate considerations now extend across the entire industry. Customer concerns no longer focus solely on individual product packaging but also encompass the processing and handling throughout the entire supply chain.

This is why Eko fit products and packaging are also processed so they can be recycled.

We are proud of and stick to this.

A RELIABLE CHOICE

CERTIFICATIONS

WE HAVE THOUGHT OF EVERYTHING

- 1 No corner posts to impede access to products
- 2 All joints are concealed so there are no screws or other fittings to get caught or cut on
- 3 Both aluminium and PE-HD slats are devoid of sharp edges
- 4 As none of our materials can rust, they cannot develop hazardous burrs or peeling
- 5 Our slats prevent packaging from freezing to the shelf and thus being ruined and posing a handling risk
- 6 Specification of load capacity on every single shelf protects against overloading
- 7 Optional white boards on terminal frames prevent products from sliding out and can function as information boards at the same time
- 8 Removable polyethylene shelf elements for easy cleaning

EKO FIT POLYMER SHELVING

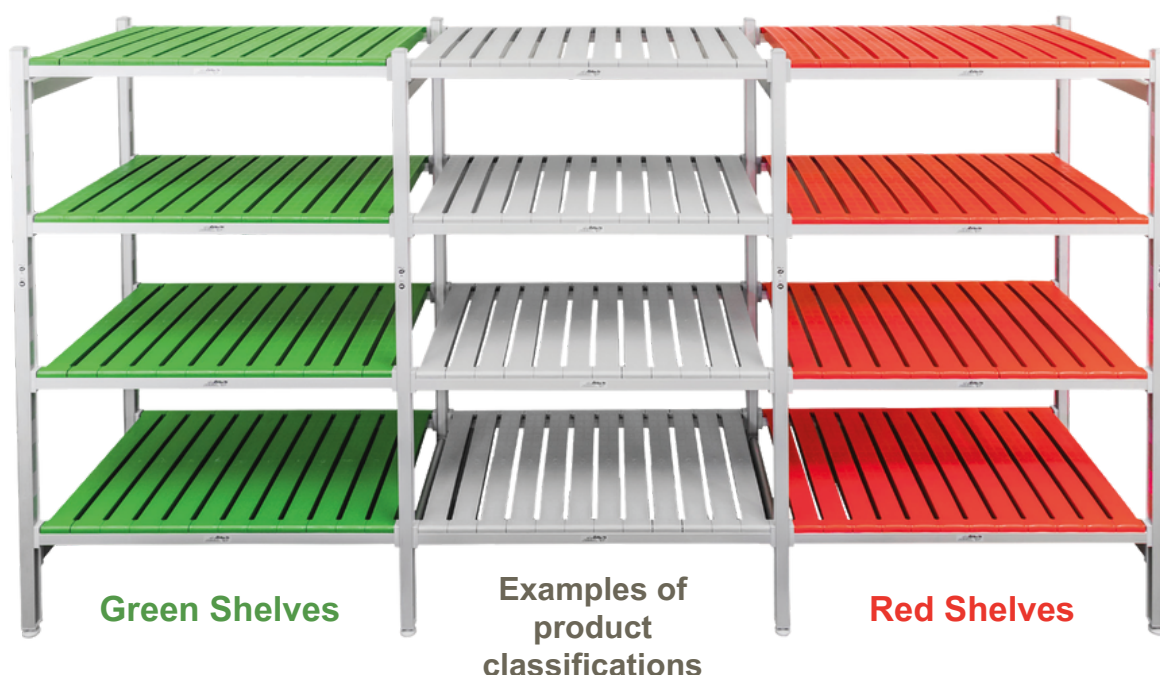

We mean it when we say it should be easy.

That's why the system was developed so you can be sure your employees can work as efficiently as possible in your storage facility.

Colours are decoded much faster and with much greater certainty than that of verbal agreements or written instructions.

There are countless options for what the individual colours must symbolize: you decide depending on which needs you have to meet.

Disorder and lack of overview are some of the greatest causes of error. At best, this wastes lots of time and at worst it causes outright errors.

- Vegetables
- Customer-ordered products
- Ready for launch starting next week
- Employee shelf

- Meat products
- Products with critical shelf-life
- Current bargains
- Particularly sensitive

COLOUR CODING

Colours are deciphered both more exactly and much faster than written texts or verbal messages. Therefore, proactive use of our colour-coded slats will be instrumental in minimising the time your employees spend in the storage facility. For example, using red shelves for products with critical best-before dates will promote getting them sold rather than discarded.

The colours of Eko fit solutions are not just for the sake of appearance

This image shows a full page of white paper with horizontal dotted lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no margins, text, or other markings on the page.
